Leonid Jakimovski

Senior Software Developer — Angular

PROFILE

Software developer with 7+ years of experience building for the web, specialising in Angular. Currently a Senior Software Developer at Atis Software Factory, where I build complex, large-scale Angular applications and turn demanding business requirements into fast, maintainable and user-friendly products. My background in designing and building websites from scratch gives me a strong eye for UI, layout and the user experience.

EXPERIENCE

Senior Software Developer

2021 – Present

Atis Software Factory · Remote

- Architect and develop feature-rich Angular applications with clean, modular and scalable code.
- Break down complex problems and design practical solutions, from data flow and state management to performance.
- Connect Angular applications to existing REST APIs: consuming endpoints, mapping data and handling loading and error states.
- Review code, share knowledge and help keep quality and best practices high across the team.
- Work closely with clients and teammates in a fully remote setup, from requirements to delivery.

Angular · TypeScript · RxJS · API integration · SCSS

Junior Developer

2019 – 2021

CodeDesk

- Built websites end to end: from layout and visual design to responsive, cross-browser implementation.
- Learned the fundamentals of UI/UX: typography, colour, spacing and designing with the user in mind.
- Turned design mockups into clean, pixel-perfect HTML, CSS and JavaScript.
- Built a strong foundation in web development that later grew into building full applications.

HTML · CSS · JavaScript · Responsive design · UI/UX

PROJECTS

Wedding Invitation

Angular · API · Animations

wedding-inv.softwareio.click · github.com/leojk11/wedding-inv-ng

An interactive digital wedding invitation that lets couples invite guests and collect RSVPs, backed by a custom API (Node.js, REST). Work in progress, with an admin panel for controlling the whole page dynamically coming next.

Invoice Generator

JavaScript · HTML · CSS

invoice-generator.softwareio.click · github.com/leojk11/invoice-generator

A mobile-friendly web app that helps small businesses create and send invoices, even from a phone. Built in pure JavaScript.

SKILLS

Frontend	Angular · TypeScript · RxJS / Signals · HTML · SCSS
Backend	Node.js · REST & GraphQL · SQL
Tools & Cloud	Git · Azure / AWS
